How to further your Virtualization Strategy

Now that you have realized the value of adding virtualization to your IT production plans you should consider further solutions to improve on your success today. Whether you are using vSphere, Hyper-V, Citrix or vWorkspace there are dozens of proven technologies.

Simplify IT w/ VMware vSphere

VMware products and solutions help you transform your company's IT organizations by virtualizing computing, from the data center to the cloud to mobile devices. Our solutions help you operate more efficiently and reliably deliver applications and services on-demand to any device, anytime, anywhere. VMware delivers maximum uptime while optimizing your IT resources with High Availability at little cost in the most demanding enterprise production environment for years to come.

Software-Defined Data Center

STSG has implemented hundreds of Virtualized farms over the last 10 years with Dell, VMware and Citrix

expanding the cost and operational benefits of server virtualization to the entire data center, including network, security, storage and management along with integrating third party applications into vCenter. We've added comprehensive and advanced management and automation capabilities to the industry leading virtualization platforms. Finally, company resources can quickly adapt to changing conditions based on performance, applications needs and user demands.

Hybrid Cloud Solutions

By extending the software-defined data center, STSG can extend to the public clouds operated by VMware. Customers can leverage a common management pane, orchestration, networking and security model as they integrate existing applications and infrastructure with next-generation applica-

tions and the ability to run any workload, anywhere.(see below)

Save \$300—Register Now for VMWorld 2015

Join 25,000+ attendees for August 25-29th in San Francisco. From data center to the user device, VMworld will deliver the essential tools and training providing real business value back to your organization and opportunity to connect with the individuals who are transforming IT. Go to VMware.com to register by June 10th for the full training and educational ses-

sions, social events, corporate presentations and networking with others in your business.

Training Class Specials:

STSG with VMware is offering a 15% discount on all VMware classes through March 30th. Email Lisa.Lewis@stsginc.com for more details and schedules.

25% HealthCheck Discounts

STSG is offering an additional 25% discount on projects committed to by March 30 to be used in April or May. This is normally a 3 to 5 day engagement where STSG will assess your application problems and provide a design with recommendation to improve your virtual farm and user experience.

STSG offers consulting services:

- Healthcheck Assessment and best practices consulting work
- TCO/ROI free study & report
- Free Integration assessment of all parts of your network, SAN, and Management application,
- Virtual back-ups, High Availability to Disaster recovery using vCloud
- Network optimization
- Data Dedup and compression
- Security "End to End" from mobile user to End Point Security for all virtualized farms.

Customer Virtualization Success Story

Texas General Hospital, located in Grand Prairie, Texas is a growing healthcare organization created in 2012 to serve the local community. Their first task was to select STSG to upgrade their IT services for their staff and ultimate patients. STSG analyzed their needs and upgraded their Dell servers, creating a VMware farm with high availability. This farm now supports a 7 by 24 hour operation from the ER to in/out patient services. We are assisting in their HIPPA compliance for patient information. STSG now manages their Exchange 2013 HIPPA email compliant services for 250 users via Intermedia in the cloud including desktop protection from Kaspersky's "Total Security" solution.

(Cont.) Front page: Virtualization Practice

End-User Computing

At STSG, we believe VMware users should have one place to securely access all their applications, both 32/64 bit and web accessible, including files and online services they need, from any device they choose, everywhere. Only VMWare extends the power of virtualization—from data centers to devices—so IT can deliver and protect all the Windows resources users need, at the speed they expect, with the efficiency your business demands. See diagram at right for technology components.

VMware's vision of merging in-house and vCloud technologies (see diagram shown at right).

vCloud Suite enables IT to build and manage a vSphere-based private cloud resulting in strategic IT outcomes. It does this by assembling an integrated Suite of products, engineered to work better together, which provide:

- 1) Infrastructure virtualization
- 2) Disaster recovery and testing automation, and
- 3) Cloud management for on-premises vSphere environments.

For a demo and free design study of your needs please call STSG or email us:

vCloud Suite

Build and Manage a vSphere-Based Private Cloud

Note: Cloud management platform components of vCloud Suite, including vRealize Automation, Operations, and Business, are specifically designed for use with vSphere environments. vCloud Suite can be extended to hybrid cloud with vRealize Suite.
